PROFESSIONAL SUMMARY

Computer Science graduate with Software Engineering and applied AI/ML experience from a full-stack internship to an end-to-end machine learning and deep learning pipeline. Seeking a Junior Software Engineer or AI/ML Engineer role to build reliable, data-driven solutions within a collaborative development team.

EXPERIENCE

- islakonek – Contact Management System***June 2024 – August 2024*
Software Engineering Intern | CVISNET Foundation Inc., IT Park, Cebu City
- Engineered a full-stack contact management system end-to-end, from database schema design to deployment, using PHP, Laravel, and MySQL, taking full technical ownership of the system supporting contact records across 4 modules.
 - Built full CRUD functionality across 4 core modules using Laravel's MVC architecture, structuring database migrations and seeders that cut manual data-entry testing time and enabled rapid local iteration for the team.
 - Designed and deployed a fully responsive Tailwind CSS interface across different application views, delivering a consistent, accessible experience on both desktop and mobile breakpoints.

SELECTED PROJECTS

- PhytoScan — Phytoplasma Disease Recognition Mobile Application***December 2025 – May 2026*
Undergraduate Thesis Project – AI/ML Engineer & Mobile Developer | Visayas State University
- Independently collected and preprocessed a dataset of 4,000 healthy and phytoplasma-infected cassava leaf images across 4 varieties, expert-validated and captured under both controlled and field conditions; applied rescaling and data augmentation to strengthen model robustness.
 - Trained and benchmarked 4 CNN architectures (MobileNetV2, ResNet34, EfficientNetB0, custom baseline), selecting EfficientNetB0 as the top performer at 98.51% accuracy and a 0.97 Cohen's Kappa score.
 - Converted the model to TFLite with quantization for offline deployment, retaining 98.13% accuracy at a compact 4.33 MB size, and integrated it into a Flutter-based Android application.
 - Designed user-friendly application screens with Filipino-English bilingual language support, making the app accessible to agricultural workers across varying levels of English proficiency and technical background.
 - Conducted end-user evaluation with cassava farmers and plant pathologists against the ISO/IEC 25010 standard across six quality characteristics — functional suitability, performance efficiency, compatibility, interaction capability, reliability, and maintainability, achieving an overall mean score of 4.29/5.00 ("Very High").

- Comparative Analysis of Machine Learning Models***December 2025*
Student ML Engineer | Visayas State University
- Collected and prepared a dataset of healthy and phytoplasma-infected cassava leaf images validated by experts, then split into 70% training and 30% testing sets.
 - Preprocessed images through resizing (224×224 px), rotation-based augmentation (90°, 180°, 270°), and a segmentation pipeline — grayscale conversion, Otsu thresholding, background subtraction, and Gaussian filtering in order to isolate leaf regions from background noise.
 - Extracted a combined set of color moments and texture features, Gray-Level Co-occurrence Matrix (GLCM) and Local Binary Pattern (LBP) descriptors from the segmented leaf images for classical ML classification.
 - Benchmarked Random Forest, Support Vector Machine, and Decision Tree on the extracted feature set, achieving the highest accuracy (92%) with Random Forest.

GymGenius – Desktop Gym Management System

January 2023 – May 2023

Student Application Developer | Visayas State University

- Engineered a desktop-based gym management system in C# and .NET Framework as an independent capstone project, owning the full application lifecycle from requirements gathering through design and deployment.
- Automated 4 core gym operations, membership management, scheduling, payments, and equipment tracking — replacing manual, paper-based record-keeping and cutting administrative processing time.
- Implemented a centralized SQLite database with integrity constraints to manage customer and staff records, supporting efficient, reliable queries across the application.

TECHNICAL SKILLS

Languages: C/C++, Python, C#, PHP, Dart, HTML/CSS

Frameworks & Libraries: Laravel, Flutter, Tailwind CSS, TensorFlow, Keras, OpenCV, NumPy, Matplotlib, Scikit-Learn

Database: MySQL, SQLite

Tools & Platforms: Git & GitHub, Figma, VS Code, Jupyter Notebook, Google Colab

AI & ML: Machine Learning, Deep Learning, Image Processing, Extract Transform Load (ETL)

Methodologies: SDLC, MVC Architecture, Object – Oriented Programming

AI Assisted Tools: Claude, ChatGPT, Gemini

EDUCATION

Visayas State University – Main Campus | Baybay City, Leyte

Bachelor of Science in Computer Science

Graduated: July 2026

CERTIFICATIONS

- DICT Diagnostic Exam Passer – *Department of Information and Communication Technology*
