EDUCATION

Visayas State University – Main Campus | Baybay City, Leyte
Bachelor of Science in Computer Science

Graduated: July 2026

EXPERIENCE

islakonek – Contact Management System

June 2024 – August 2024

Software Engineering Intern | CVISNET Foundation Inc., IT Park, Cebu City

- Engineered and deployed a full-stack contact management system within a 3-month internship, owning everything from schema design to deployment (PHP, Laravel, MySQL).
- Built CRUD functionality for 4 core modules on Laravel's MVC architecture; migrations and seeders cut manual data-entry testing time.
- Designed and deployed a responsive Tailwind CSS interface, delivering a consistent experience across desktop and mobile.

SELECTED PROJECTS

PhytoScan — Phytoplasma Disease Recognition Mobile Application

December 2025 – May 2026

Undergraduate Thesis Project – AI/ML Engineer & Mobile Developer | Visayas State University

- Independently collected and preprocessed 4,000 expert-validated cassava leaf images (4 varieties, controlled and field conditions), applying augmentation to improve model robustness.
- Trained and benchmarked 4 CNN architectures (MobileNetV2, ResNet34, EfficientNetB0, custom baseline), selecting EfficientNetB0 as the top performer at 98.51% accuracy and 0.97 Cohen's Kappa.
- Converted the model to quantized TFLite for offline use (98.13% accuracy, 4.33 MB file size) and integrated it into a Filipino-English bilingual Flutter Android application.
- Conducted end-user evaluation with cassava farmers and plant pathologists against ISO/IEC 25010 across six quality characteristics, achieving a 4.29/5.00 ("Very High") mean score.

Comparative Analysis of Machine Learning Models

December 2025

Student ML Engineer | Visayas State University

- Collected and prepared an expert-validated dataset of healthy and phytoplasma-infected cassava leaf images (70/30 split), applying resizing (224×224 px) and rotation-based augmentation.
- Built a leaf segmentation pipeline (grayscale conversion, Otsu thresholding, background subtraction, Gaussian filtering) and extracted color moments, GLCM, and LBP features.
- Benchmarked three classical ML classifiers (Random Forest, Support Vector Machine, Decision Tree) on the extracted features, with Random Forest achieving the highest accuracy at 92%.

GymGenius – Desktop Gym Management System

January 2023 – May 2023

Student Desktop Application Developer | Visayas State University

- Engineered a desktop-based gym management system in C# and .NET Framework as an independent capstone project, owning the full application lifecycle from requirements gathering through design and deployment.
- Automated 4 core gym operations, membership management, scheduling, payments, and equipment tracking — replacing manual, paper-based record-keeping and cutting administrative processing time.
- Implemented a centralized SQLite database with integrity constraints to manage customer and staff records, supporting efficient, reliable queries across the application.

TECHNICAL SKILLS

Languages: C, C++, Python, C#, PHP, Dart, HTML, CSS

Frameworks & Libraries: Laravel, Flutter, Tailwind CSS, TensorFlow, Keras, OpenCV, NumPy, Matplotlib, Scikit-Learn

Database & Tools: MySQL, SQLite, Git, GitHub, Figma, VS Code, Jupyter Notebook, Google Colab

Concepts: SDLC, MVC Architecture, Object – Oriented Programming (OOP)

AI & ML: Machine Learning, Deep Learning, Image Processing, Extract Transform Load (ETL)

AI Assisted Tools: Claude, ChatGPT, Gemini
